

OVULATION DETECTOR

The detector is a portable device that helps determining the optimal time for mating.

The detector is a small, portable and very versatile instrument which is powered by a common 9V battery. It gives readouts of electrical resistance of vaginal mucus which undergoes characteristic changes during the course of heat.

The detector for dogs enables:

- exclusion of multiple mating of the bitch
- identification of so called "false heat"
- elimination of problems associated with disorders during heat
- time saving
- great reduction in financial costs of multiple mating

The Ovulation Detector for dogs has given favourably results in tests at the Obstetrics Department. of the Faculty of Veterinary Medicine at the University of Agriculture and Technology, Olsztyn, Poland. The advantages of using the detector have also been confirmed by research carried out at the university in Giessen, Germany.

PREGNANCY DETECTOR

The detector is a portable and cost effective ultrasonic instrument which identifies whether a bitch is pregnant or not with maximum accuracy.

This is portable device, powered by the battery. Easy to use enables quick and reliable determination of the pregnancy.

The DRAMIŃSKI Ultrasonic Pregnancy Detector determines pregnancy in dogs by locating amniotic fluid in the uterus.

The DRAMIŃSKI Ultrasonic Pregnancy Detector is ideally suited to pregnancy determination for individual breeders, large breeding & show kennels, veterinary surgeries and commercial organisations alike.

It is designed to be easy to use, maintain and provide rapid results with maximum accuracy.

WHO IS DRAMINSKI?

DRAMINSKI Electronics in Agriculture was created in 1987 in Poland. They manufacture a full range of electronic equipment used in farming, veterinary medicine and stock breeding.

At present, the company employs over 20 people, divided into vigorous and creative departments: manufacture, sales & marketing, logistics, forwarding & informatics.

Equipment designed and manufactured by DRAMINSKI is being exported to numerous European states and to other continents (North & South America, Asia, Africa and Oceania). They display their products at popular fairs home and abroad on a regular basis. They cooperate with research centres all over the world; therefore, their manufacturing plans include devices based on the most advanced technologies.

ISO 9001:2000 CERTIFIED

Competing in the world today requires the implementation of a quality management system based on international standard ISO 9001.

Quality means complete satisfaction of needs and expectations of a customer. Every-day functioning of the system, involves significant expenditure of labour on the part of internal auditors, management attention and, first of all, commitment of their employees

DRAMINSKI Electronics in Agriculture implemented the quality management system and was given a positive recommendation by PCBC (Polskie Centrum Badań i Certyfikacji) auditor in March 2006, granting them ISO 9001:2000 certification.

Nevertheless, the certificate is not an end in itself. Implementation of the ISO system strongly contributed to the enhancement of the company's prestige and continuing efforts at improving and perfecting work quality.

WHO IS QUINNCARLIN?

The kennel QuinnCarlin Cavaliers was CKC registered in 2003.

The first time Judy had a surgical AI performed on a bitch, she was quite shocked at how costly progesterone tests were (just under \$100 including the courier). The process required several tests in order to pinpoint the time of ovulation. Frozen sperm are only viable for a couple of hours therefore the timing had to be exact.

After this experience, Judy researched alternative methods. She wasn't happy about drawing blood to perform the progesterone test and therefore was not inclined toward the do-it-yourself progesterone testing that is available.

Then she discovered Draminski! After careful research and reading hundreds of testimonials of dog breeders who have used the products all over the world, she was hooked!

When offered the opportunity to make these products available to Canadian breeders she happily accepted and QuinnCarlin Distributors Ltd was incorporated in the spring of 2006.
